

Assistant

Coverage intelligence inside your portfolio workspace

General Chat · Compliance · Broker-ready output

Internal reference

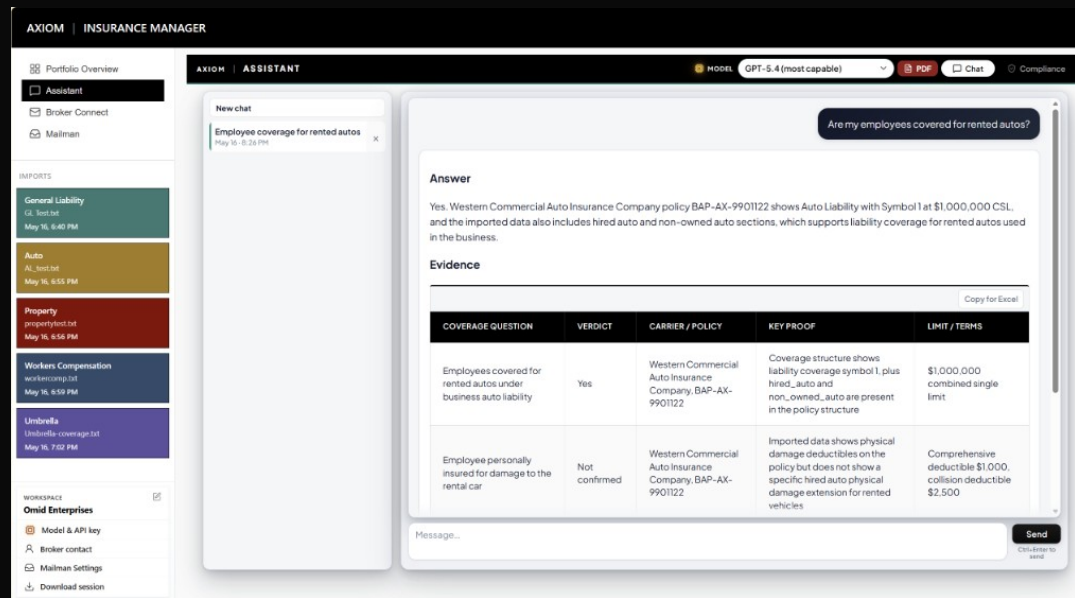

Executive summary

What Assistant does

Assistant is the coverage intelligence layer inside Insurance Manager. It answers portfolio questions in General Chat and reviews contracts in Compliance, always grounded in the book you imported. Teams can choose cloud or offline models, surface gaps with citations, and export broker-ready reports from one workspace.

At a glance

- Session-grounded answers with evidence tables
- Contract compliance mapped to your imported program
- Cloud or offline model choice for your policy

Ask questions against your book

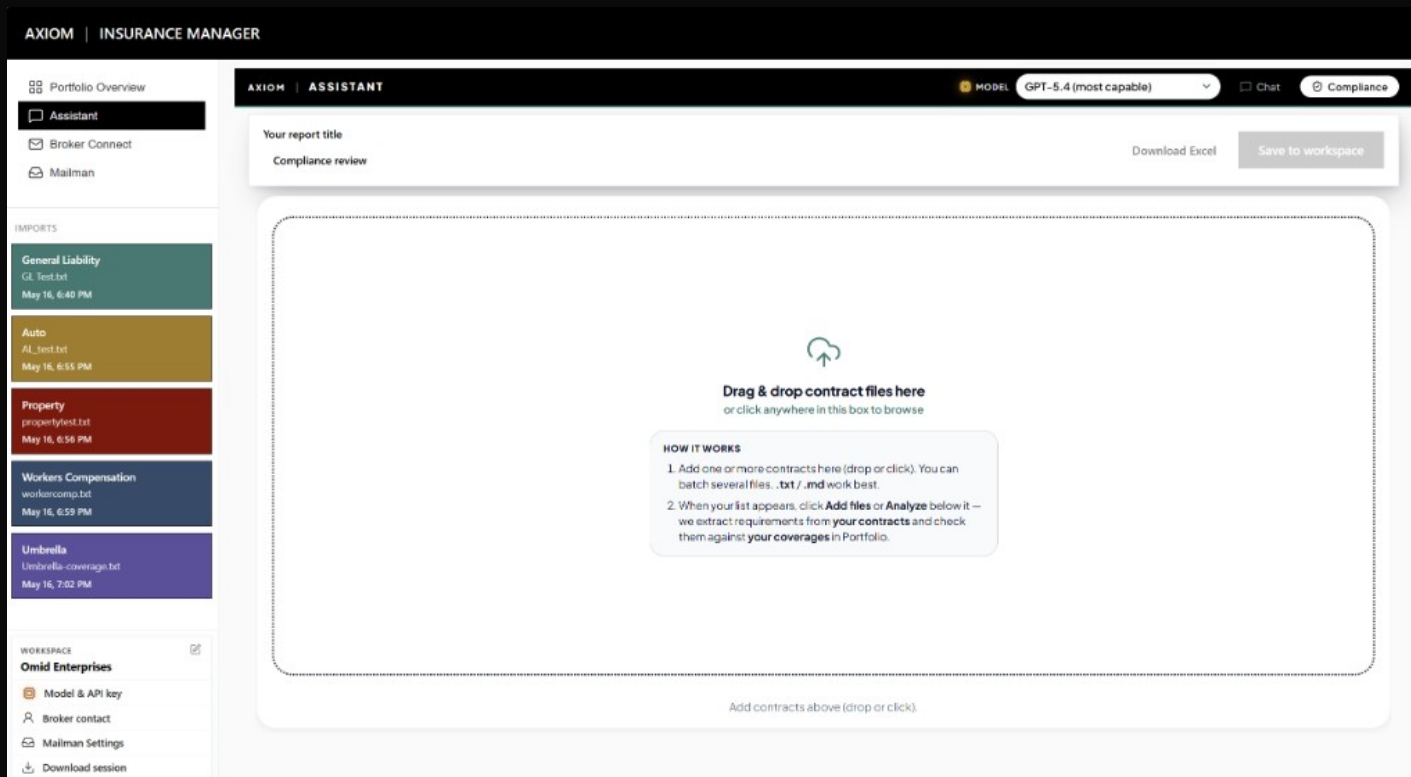

General Chat answers coverage questions using the portfolio session you already imported. Responses include evidence tables with carrier, policy, limits, and proof so teams can move quickly without guessing.

CAPABILITIES

- Model selector with cloud models or offline AI mode
- General Chat with evidence tables tied to your portfolio session
- Compliance workflow to map contract requirements to your program
- Broker-ready exports: Excel download, workspace save, tag, and send

WHY IT MATTERS

- Same normalized session as Portfolio, Exposures, Broker Connect, and Mailman
- Grounded on vault facts in your workspace, not invented limits or carriers
- Offline mode when data residency or air-gapped review matters

Contract compliance review

Compliance uploads contracts, maps requirements to your program, and walks through gaps, partial matches, and compliant rows. Export broker-ready output without leaving the workspace.

Analyze

Your OpenAI key runs the checks; we compare your contracts to policy data from your Portfolio. Large files may be truncated.

Add contracts and analyze

Drop or browse contract files in Compliance (.txt and .md work best). Batch several files, review the list, then click Analyze. Requirements are extracted from your contracts and checked against coverages already in Portfolio.

Reading your contract

Assistant processes uploaded files against policy data from your portfolio imports. Your API key runs the checks; large files may be truncated per model limits.

Review complete

Requirement	test-insurance-requirements
Provide Additional Insured status on the General Liability policy in favor of the required upstream party or certificate holder.	Non_compliant I could not find an additional insured endorsement on your GL coverage naming the required upstream party or certificate holder. Your GL information shows the core limits, but it does not show this contract-required status, so you would need the specific endorsement to satisfy this. Declarations (p. 1)
Provide Primary and Non-Contributory wording on the General Liability coverage in favor of the required upstream party or certificate holder.	Non_compliant I could not find primary and non-contributory wording on your GL coverage for the required upstream party or certificate holder. To meet this requirement, your GL policy usually needs a specific endorsement showing that wording. Declarations (p. 1)
Provide a Per Project / Per Location Aggregate on the General Liability policy.	Non_compliant Your GL coverage shows a \$2,000,000 general aggregate, but I could not find wording that makes it apply on a per project or per location basis. That usually requires a specific endorsement, and I did not see one here. Declarations (p. 1)
Maintain Business Automobile Liability insurance covering owned, non-owned, and hired vehicles with a combined single limit of not less than \$1,000,000 per accident.	Partial Your auto coverage shows a \$1,000,000 liability limit, which matches the required amount. But the record I reviewed does not clearly confirm owned, hired, and non-owned auto coverage wording together, so you may need the full auto policy or endorsement schedule to prove this requirement completely. Business Auto coverage structure: Auto liability limit \$1,000,000
Provide Waiver of	Partial

Gap identification

The review table maps each contract requirement to your program. Non-compliant rows flag missing coverage with explanations and citations back to declarations, forms schedules, and policy files in your workspace.

Maintain Business Automobile Liability insurance covering owned, non-owned, and hired vehicles with a combined single limit of not less than \$1,000,000 per accident.	Partial Your auto coverage shows a \$1,000,000 liability limit, which matches the required amount. But the record I reviewed does not clearly confirm owned, hired, and non-owned auto coverage wording together, so you may need the full auto policy or endorsement schedule to prove this requirement completely. Business Auto coverage structure · Auto liability limit \$1,000,000
Provide Waiver of Subrogation in favor of the required upstream party or certificate holder.	Partial Your workers compensation coverage includes a waiver of subrogation endorsement, which helps for that line. But I could not confirm the same protection on your GL coverage or other applicable liability lines in favor of the required upstream party or certificate holder, so this is not fully supported yet. WC 99 06 13 - Forms Schedule p.7
Maintain Completed Operations coverage for 3 years.	Partial Your GL coverage includes products-completed operations aggregate coverage during the policy term, but I could not find language showing completed operations will be maintained for 3 years. This usually needs to be confirmed by contract compliance tracking, renewal evidence, or a separate commitment rather than the current GL declarations alone. Declarations (p. 1)
Provide evidence of required insurance before work begins, including a certificate of insurance and any required endorsements that clearly show the required coverages, limits, and policy conditions.	Partial You have policy evidence showing the main GL limits, workers compensation, employers liability, and umbrella limits. But I could not confirm a certificate of insurance and the required endorsements showing additional insured status, primary and non-contributory wording, per project or per location aggregate, and any other required conditions. Before work begins, you would want those documents assembled so the contract requirements are clearly shown. Declarations (p. 1) · WC_POLICY_2026.pdf · Umbrella declarations p.1

Partial matches

Partial status when limits or wording almost align but endorsements, additional insured status, waivers, or duration requirements still need broker follow-up. Each row cites the closest proof found in your book.

\$2,000,000 general aggregate, and \$2,000,000 products-completed operations aggregate.	
Maintain Workers' Compensation insurance as required by applicable law.	Compliant Your workers compensation is statutory. WC Coverage Part p.6
Maintain Employers Liability insurance with limits of not less than \$1,000,000 each accident, \$1,000,000 disease-policy limit, and \$1,000,000 disease-each employee.	Compliant Your employers liability limits match exactly. Declarations p.1
Maintain Umbrella/Excess Liability insurance with limits of not less than \$5,000,000 per occurrence and \$5,000,000 aggregate.	Compliant Your umbrella limits exceed the requirement. Umbrella declarations p.1

Run another analysis

Re-checks your uploaded contracts against your portfolio. Add or remove files in the panel on the right first if you need a different set.

Compliant requirements

Compliant rows confirm umbrella, WC, GL, auto, and other limits meet contract language with source references. Download Excel, save to workspace, tag the request, and send the report to your broker from the page.
