

COLLABORATIVE

EXPLORATORY

PRACTICAL

LONG-TERM

Edge AI & Sensor Fusion: Using resource-efficient edge AI computers and local models to combine multiple sensor streams into a unified real-time operational view

Mission & Objective

Why this group exists

- Pioneer the evolution of next-generation insurance brokering
- Promote innovation, collaboration, and responsible technology development
- Empower each other to contribute through our own strengths and perspectives

Why Now?

The industry is entering a period of accelerated technological change

- AI and automation are reshaping operational expectations
- Client expectations continue to increase
- Organizations must adapt without sacrificing service quality
- Early understanding creates long-term advantage

What This Group Is

A collaborative environment for practical innovation

- Cross-functional and interdisciplinary
- Focused on exploration, experimentation, and execution
- Built around responsible use of emerging technologies
- Open to technical and non-technical contributors alike

Our Principles

How we approach innovation responsibly

- Collaborative
- Exploratory
- Practical
- Long-Term

The Role of Emerging Technologies

In a changing environment, technology should strengthen, not replace, the broker

- Enhance operational efficiency
- Improve consistency and speed
- Support better decision-making
- Preserve relationship-driven service

How People Contribute

Innovation comes from many different strengths

- Operational insight
- Leadership and communication
- Technical experimentation
- Problem identification and process improvement

How People Contribute

Innovation comes from many different strengths

- Operational insight
- Leadership and communication
- Technical experimentation
- Problem identification and process improvement

What Success Looks Like

Building momentum through practical outcomes

- Internal knowledge sharing
- Process improvements and automation ideas
- Responsible experimentation with AI tools
- A culture of adaptability and innovation

Closing

The future of the industry will be shaped by those willing to engage with it early

- This group exists to learn, build, and evolve together
- Everyone has a role to play
- The objective is contribution, not perfection

Executive Summary | Oregon EV Demand Snapshot

Prepared for investors | Data source: ODOT EV registrations (ODOT-EV-Data.xlsx)

The EV Plug is building an EV charging network in Oregon, and the ODOT registration dataset provides a practical, investor-friendly proxy for near-term charging demand because it measures real vehicles entering the addressable fleet. The headline takeaway is that adoption is not evenly distributed. Registrations cluster heavily in a handful of counties anchored by the Portland metro area, with a long tail of smaller markets that will matter over time but are less likely to support high-utilization public fast charging in the earliest phases. That concentration is a feature, not a bug. It enables a disciplined rollout where early sites can be placed in the highest-density corridors to maximize utilization, reduce payback time, and generate operational data that improves later siting.

From a demand-timing standpoint, the monthly registrations trend indicates whether the market is accelerating or stabilizing. For infrastructure investors, this matters more than raw cumulative counts because utilization is driven by the inflow of vehicles and the maturity of local charging behavior. A rising trend supports a more aggressive build plan and interconnect pipeline. A flat or noisy trend argues for focusing on execution quality, redundancy, and reliability in the highest demand pockets rather than chasing statewide coverage too early. In either case, the dataset supports a phased approach: prove high uptime and strong unit economics in the top demand counties first, then expand outward as utilization and fleet mix evolve.

The market-mix view adds another layer that is directly relevant to station design. The make leaderboard and the new-versus-used split help approximate charging expectations and willingness to pay. A market dominated by newer vehicles tends to correlate with higher acceptance of fast charging, higher sensitivity to uptime, and a greater share of vehicles capable of faster charge rates. A meaningful used-vehicle share suggests broader price sensitivity and reinforces the importance of transparent pricing, predictable performance, and convenient locations. Vehicle type mix also matters. A heavier SUV share can imply larger batteries and potentially longer sessions, which affects stall count and peak power planning.

Putting these findings together, the investment case is to concentrate capital and operational attention where the data shows the greatest density of registered EVs, use the trend to pace the rollout, and use the mix to optimize hardware choices, power delivery, and customer experience. Near-term execution should prioritize site acquisition and utility coordination in the top counties, with corridor mill to connect those markets and reduce range anxiety. The goal of the first phase is to build a portfolio of high-performing sites that demonstrate utilization, reliability, and repeat usage. That foundation is what supports attractive project finance terms, lower cost of capital, and faster statewide expansion.

Note: Registrations are used as a demand proxy. Latest months can be partial depending on data refresh timing.

COMPLIANCE NOTES

DOCUMENT TYPE
Not a COI — executive summary

Compliance report

Assessment

has not been uploaded.

This document is an executive summary/investor-facing market snapshot about Oregon EV demand and charging-network rollout strategy, not an insurance certificate with carrier, policy, limits, endorsements, or certificate holder details.

Green outlines: requirement met. Red outlines: needs review. Use Map on the bar above the PDF.

General Inbox

The screenshot displays the COI Tracker Mailroom interface. On the left is a sidebar with navigation options: Main Menu, Certificates (5), COI Review, Mailroom (selected), Properties (3), Tenants (12), Reports, Import Data, and Settings. Below the sidebar, there's a section for the active client, Farnsworth Properties, Inc., and a user profile for Dev User (dev@example.com).

The main area is titled "Mailroom" and shows a list of tracked emails. The list includes entries for Cascade Pet Supply and Evergreen Consulting, with details on their status (e.g., "Tenant replied", "AGENT", "Inbound - needs review") and time elapsed. A red circle highlights the "mylas connection" status, which is "ONLINE" and "AUTONOMOUS".

On the right, a detailed view of a message from Cascade Pet Supply is shown. The message is dated May 5, 2026, at 11:49 PM. The subject is "Re: Reminder: Insurance Certificate Required - Cascade Pet Supply [COI-TRK:7c124434-70af-425b-be69-6c6cf7e01029]". The sender is axiom_coi@outlook.com and the recipient is dylan@cascadepetsupply.com. The message body says: "Thanks for your message. We will review and follow up shortly. If you have any questions, please contact: Omid Rezaee, omid.rezaee@x.com | 541-555-5555. Best regards, Omid Rezaee. Certificate of Insurance Compliance, ABC Company. AXIOM.
